[ProjectInfo]

The individual light modules, which are in sizes up to 2.2 m x 4.2 m (7.5' x 13.5'), create a homogeneous light ceiling. The custom engineered operable translucent modules of the illuminated ceiling support the SEFAR® Architecture IA-80-CL fabric. This fabric does not augment the light color and creates exactly the right light for color-accurate presentations of the valuable exhibits. The SEFAR® Architecture fabric is VOC free and is acoustically significant as sound-absorbing element, improving the museum guest's experience.
