

Light ceiling, Unique (Zürich Airport AG)

LIGHT FRAME

LF100.2

Project. Redesign of the airport shopping concourse at Terminal 1. Covering a surface area of 300 m², this is the first large Sefar light-field in Switzerland and the first fabric ceiling at the airport. Guests at Unique should have a sense of well-being whether they are about to take off or have just landed. The same applies to Unique employees and their airport partners, who spend each and every day here.

Concept/Design. Florin Baeriswyl from dia AG, based in Zürich, has introduced a bright, new symbol: a ceiling that lifts off! With the newly developed light ceiling, the look of

a real sky can be simulated through innovative optical variations. A series of light changes imparts a sense of space and natural feeling. This interplay of cold and warm lighting effects has been made possible using Sefar Architectural Fabric Modules LF AS 02-65-K and has a fascination all of its own.

Construction. The technically perfect transformation in metal and glass by the licensed contractor, Krapf AG, is a successful first. The light-transparent construction gives visitors a feeling of "open sky": the right symbol in the right place.

Project/Location: Unique (Zürich Airport AG), Switzerland, Terminal 1/Car park lift 1

Architect: Florin Baeriswyl, dia AG, Zürich, Switzerland, www.dai.ch

Engineering: Greiner & Gutmann, Oberaichen, Germany, www.greiner-engineering.com

Assembly/Implementation: Krapf AG, Engelburg, Switzerland, www.krapfag.ch

Fabric/System: SEFAR® Architecture Modules LF AS 02-65-K

Light Frame Modul: 1875 x 2150 mm

Photography: Peter Koehl, buobundschuess.ch
