

Sefar Solutions for Woundcare

SEFAR MEDIFAB fabric as a single-layer overlay or SEFAR MEDITEX ACC as a multi-layer overlay allow unsurpassable professional treatment of different wounds.

Product Features

Function

SEFAR MEDIFAB and SEFAR MEDITEX ACC allow the treatment of different types of wounds. Whether as a contact layer for low-pressure wound therapy, as a supporting fabric in skin grafts or as a carrier for drugs and ointments, these non-adherent products are characterized by having well-defined surface properties and a homogeneous structure.

By choosing a specific yarn or equivalent coating, numerous other functions (e.g., antibacterial) can be achieved, which facilitates the development of new high performance wound dressings.
